

NEWS LETTER

May 2026 Edition

From The Chairman's Desk:

Dear Team & Partners,

As the monsoon season approaches, water quality becomes a concern that touches every home, every workplace and every industry. Seasonal changes can significantly affect what comes out of our taps and it is a timely reminder of why reliable filtration is not a luxury but a necessity.

At Microfilter, our commitment to delivering solutions that protect people and power industries remains as strong as ever.

I am also excited to share a milestone that means a lot to us Microfilter products are now available across Amazon, Meesho and Flipkart. This is more than just an e-commerce expansion, It is about making quality water filtration accessible to every retail indian household, in every corner of the country with the ease and convenience they deserve.

Why Water Filtration Matters More During Monsoon

The monsoon is a welcome relief but it brings with it a challenge that most people don't think about until it's too late. As rainwater flows across rooftops, roads and open land, it picks up dirt, bacteria, sediments and pollutants along the way.

A reliable filtration system works quietly in the background to make sure the water reaching your glass, your kitchen and your equipment is genuinely safe. It removes suspended impurities, improves taste and clarity, protects your pipelines and appliances from sediment damage and gives you the confidence that your water is clean whether at home or in an industrial setting.

The monsoon season is honestly one of the best times to check your filtration setup and make sure everything is working the way it should.

A little maintenance goes a long way this season. Clean and replace your filter cartridges regularly, avoid letting water sit stagnant in tanks or containers, check pipelines for any signs of contamination or leakage and schedule a quick service check on your water systems before the rains peak.

These are small habits but they make a real difference to your health and your home.

Clean water today means better health tomorrow. Don't wait for a problem to remind you monsoon is the season to be proactive about the water you drink.

Thank you for your continued trust and partnership. Let us continue working together towards excellence, sustainability and growth.

Warm Regards,
Mr. Shailendra Mangal

Message from the Whole-Time Director

Dear Team & Partners,

At Microfilter Polymers Limited, International Women's Day was celebrated with appreciation, respect and gratitude for the incredible women who contribute to our workplace and society every day.

Women bring strength, dedication, leadership and balance to every role they undertake. Their contributions go far beyond professional responsibilities they inspire progress, innovation and positive change.

The celebration at Microfilter was a small gesture to recognize and appreciate the efforts, achievements and resilience of the women who continue to make a meaningful difference within our organization.

We strongly believe that an inclusive and supportive workplace empowers individuals to grow, succeed and inspire others. As an organization, we remain committed to encouraging equality, opportunity and respect for all.

On this occasion, we extend our heartfelt appreciation to all women for their strength, determination and endless contributions.

Warm regards,
Mrs. Ritu Mangal
Whole-Time Director
Microfilter Polymers Ltd.

Quote Of The Month

"Clean water and sustainable solutions build healthier communities and stronger industries."

Microfilter at VMA SYNERGY 1.0 - Where Leadership Meets Innovation

Great ideas don't grow in isolation they grow in rooms where the right people come together, share openly and challenge each other to think bigger. That is exactly what VMA SYNERGY 1.0 was and we are proud to have been a part of it.

Microfilter Polymers Limited was delighted to extend its support as a sponsor for the VMA SYNERGY 1.0 Management Conclave held right here in Nagpur. The event brought together industry leaders, seasoned professionals and forward-thinking experts for a day of meaningful conversations around leadership, business growth and innovation.

For us, sponsoring an event like this was a natural choice. We have always believed that building a stronger industry goes beyond the products we make it also means investing in the knowledge, the people and the platforms that keep pushing the community forward.

Events like SYNERGY 1.0 remind us that collaboration and learning are not just good values they are smart business. And we left the conclave inspired, energised and even more committed to being a part of initiatives that drive real, meaningful progress.

We are proud to be a part of initiatives that inspire innovation, leadership and collective progress

Celebrating Values, Dedication & Heritage

The month of May brings with it occasions that inspire us through values of peace, hard work and pride in our roots. At Microfilter Polymers Limited, we take a moment to reflect on the significance of Buddha Purnima carrying a meaningful message for society and workplaces alike.

Buddha Purnima marks the birth anniversary of Gautama Buddha, whose teachings continue to inspire millions around the world. His message of peace, compassion, mindfulness and simplicity reminds us of the importance of maintaining balance in our personal and professional lives. This occasion encourages us to practice kindness, patience and positivity while working together towards common goals.

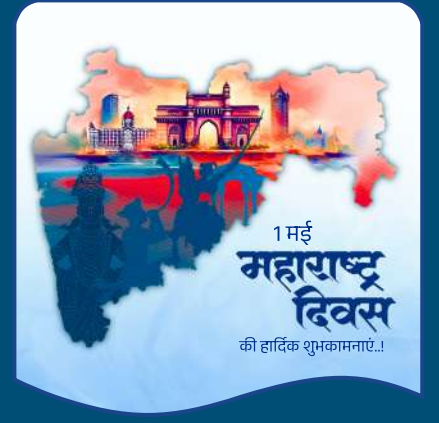

Maharashtra Day - Celebrating Pride and Progress

Observed on May 1st, Maharashtra Day commemorates the formation of the state of Maharashtra. It is a day to celebrate the rich culture, resilience and industrial progress of the state.

Being part of Maharashtra's growing industrial landscape, we take pride in contributing to its development and progress through innovation and quality-driven solutions.

These occasions remind us of the importance of wisdom, dedication and unity values that strengthen organizations and communities alike. Let us continue to work together with positivity, commitment and a shared vision for growth.

Labour Day - Honouring the Workforce

Labour Day is a tribute to the dedication and hard work of workers across every industry. It recognizes the invaluable contribution of individuals whose efforts drive progress and growth.

At Microfilter, we deeply value the commitment and teamwork of every employee who contributes to our journey. Labour Day reminds us that every achievement is built on the strength, determination and dedication of people.

Be Prepared During Hot Summer Days

As temperatures continue to rise, taking precautions is equally important to stay healthy and hydrated.

Summer Precautions to Follow

- 💧 Drink sufficient clean water to avoid dehydration
- 🍎 Eat fresh fruits and light meals
- ☀️ Avoid direct sunlight during peak afternoon hours
- 🏠 Keep indoor spaces cool and ventilated
- 🚰 Use clean, filtered drinking water

Excessive heat can lead to fatigue and dehydration, making hydration and water quality extremely important.

A healthy summer prepares us for a safer monsoon season.

Monsoon & the Water Industry - Preparing for the Season of Change

The monsoon arrives every year like a long-awaited guest bringing relief, life and the smell of fresh rain on dry earth. But for the water industry, it brings something else too: a season that demands preparation, attention and a system that is genuinely ready for what the rains bring with them.

As beautiful as the rains are, what happens to water during this season is not always pretty.

Surface runoff sweeps across roads, fields and open land picking up mud, sediments, bacteria and pollutants along the way before finding its way into rivers, lakes and underground water sources. The very rainfall that replenishes our water supply can also compromise its quality and that tension is exactly what the water industry must prepare for every single year.

What looks like a blessing from above can quietly become a challenge below the surface.

This is the season when filtration and treatment systems are truly put to the test. Turbidity spikes. Water quality fluctuates unpredictably. Filters work harder and need more frequent attention. Treatment plants must handle greater volumes while maintaining the same uncompromising standards of safety and purity.

For industries that depend on consistent water quality whether in manufacturing, food processing, pharmaceuticals or infrastructure there is simply no room for a system that is not ready.

The checklist for monsoon preparedness is not complicated but it is critical timely filter replacements, regular system maintenance, proactive monitoring and safe storage and distribution protocols that hold up even when conditions outside are at their most unpredictable.

Water conservation is not a monsoon habit. But the monsoon is a powerful reminder of why it matters.

A water system that is prepared today will deliver clean, safe, reliable water tomorrow regardless of what the season throws at it. Monsoon is not just a weather event. It is a test of how seriously we take our responsibility to manage water well.

At Microfilter Polymers Limited, we are here to make sure you are ready every season, every year.

Copper Water Filters - A Blend of Purity & Wellness

There is a reason our grandparents stored water in copper vessels. Long before modern science could explain it, generations of people understood intuitively that copper and water simply belonged together. Today, that ancient wisdom is finding its place in modern filtration and the results are worth talking about.

Copper is one of those rare materials that has stood the test of time not just as a metal but as a natural ally for clean, healthy water. When water comes into contact with copper, it benefits from its natural properties that help reduce certain impurities and maintain better hygiene during storage. It is not magic it is simply nature doing what it has always done, now supported by thoughtful modern engineering.

The beauty of a copper water filter is that it brings together the best of both worlds effective modern filtration and the time-tested goodness of copper. The water that comes through is not just purified, it is fresher, better tasting and stored in a way that supports everyday hygiene naturally. It is a small but meaningful upgrade to the way you and your family hydrate every day.

As more people become mindful about what they eat, what they drink and how they live, copper water filtration offers a genuinely thoughtful choice. It connects us back to practices that have worked for centuries while meeting the standards of quality and safety that modern living demands.

Clean water is the foundation of good health. And when that water carries the added goodness of copper every sip becomes a little more worthwhile.

Employee of the Month - Vandana Wadafle (Packaging Supervisor)

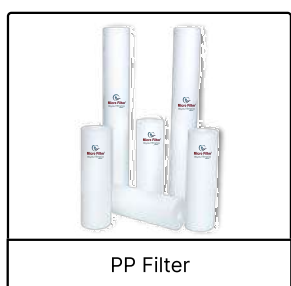

Behind every product that leaves our facility in perfect condition, there is someone making sure it gets there and this month, that someone deserves to be celebrated.

We are thrilled to recognise Vandana Vadayle, Packaging Supervisor, as our Employee of the Month! Vandana brings something special to her role every single day a sharp eye for detail, a genuine team spirit and a quiet but powerful commitment to doing things right. Her efforts in keeping our packaging operations smooth, efficient and consistently high quality have made a real and lasting impact on how we deliver to our customers.

Vandana, this recognition is truly well deserved. The entire Microfilter family is proud of you and grateful for everything you bring to this team from last 20 years. Keep inspiring us!
